

Underground Warning Mesh (Non Detectable / Detectable)

“**GOLDEN** Brand underground warning mesh is a colour edpolyolefin mesh for marking buried underground services. The warning mesh is manufactured and tested to BS EN 12613:2001. The brightly colour edunderground warning mesh has a middle strip that can be printed with a standard & customized warning message for easy recognition of services during excavation and is ideal as a signal mesh.

Available in:

Widths : 100mm, 200mm & 300mm

Lengths : 100m to 250m

Warning mesh can be manufactured in any colour, text or logo to customer's specifications.

Underground Warning Mesh Detectable

“**GOLDEN**” Brand Detectable underground warning mesh is manufactured with traceable wire in the tape that identifies the danger of the services laid beneath. This allows to locate pipes and cables beneath ground easily and protect services from any damage. Detectable warning mesh is a coloured tape for marking and detecting buried underground cables and pipes. This mesh can be used in conjunction with cable & pipe locators for precisely locating plastic pipes and non-live cables in future excavations. This warning mesh can be laid as a trenching tape half way between the cable or pipe and the surface during backfill. Also the mesh is manufactured from high strength coloured rot resistant homo-polymer polypropylene plastic mesh incorporating a 0.5mm AISI 316 grade stainless steel tracer wire and laminated with a printed warning tape on the top surface.

Available in:

Widths : 100mm, 200mm & 300mm

Lengths : 100m to 250m

Detectable warning mesh can be manufactured in any colour, text or logo to customer's specifications.
